

# ANNOUNCEMENT

## OIL FIND in INNER MONGOLIA

Kuala Lumpur, 20 November 2009-UZMA Engineering Sdn Bhd's quest in spreading it's wings of growth in the region of Inner Mongolia is now imminent with the successful completion of the Baiyin Chagan Da-9 drilling campaign. The drilling program consist of 5-wells cluster aimed mainly at establishing a pattern for further field development and one strategic well at the neighboring field, Da-13 to extend UZMA's vision in looking ahead for more opportunities to develop into the future.

The wells that were completed on-schedule were also a testing ground for UZMA as this is the first venture into new territory of on-shore heavy oil. As the field is classified as heavy oil area and the crude has low pour point property, the strategy for completion for this first campaign is to cluster-drill

all the wells. This would ensure optimum cost spending on operations and minimize the time required to drill and complete the wells.

Based on the data collected from the drilled wells, all six wells showed several layers of producible, good quality oil sands, subsequently proving the oil in-place (STOIIP) of approximately 65 million barrels calculated and predicted earlier in the drilled fault blocks.

Well	Spud date	Well completed date	TD (m)	Number of oil zones	Layer thickness (m)	Oil saturation (%)	Connected Oil in place (barrel)
Da 9-1	18/05/09	05/08/09	515	8	1.3 – 5.5	32.9 – 65.2	119307
Da 9-2	22/08/09	10/09/09	542	6	1.0 – 3.9	28.4 – 58.0	75790
Da 9-3	04/06/09	24/06/09	519	7	0.9 – 5.9	25.6 – 59.5	101123
Da 9-4	05/07/09	25/07/09	540	8	0.9 – 3.2	27.4 – 57.5	74777
Da 9-5	27/06/09	16/07/09	538	9	0.9 – 5.6	29.9 – 61.2	87552
Da 13-1	16/08/09	04/09/09	574	6	1.1 – 4.5	24.0 – 54.3	65405

This few months ahead would be the much awaited as well as the most crucial timing for Uzma and the team. Subject to the availability of equipment (primarily the steam injection and chemical injection equipment) and the severity of the winter conditions in Inner Mongolia, we are looking at the strategic perforation and production from the 6 wells over the next 3-4 months. The results of our perforation and the subsequent production will be made known to the Bursa Malaysia and the public as soon as available.

UZMA's total investment outlay for the first stage of investment in the Petroleum Operations, including the acquisition of 35% equity stake in the joint venture company is RM4.0 million entered into in September 2008.

---

### **About UZMA Group**

UZMA Berhad is an international Oil and Gas service company providing an array of services to the upstream sector across the exploration, development and production phases and to the downstream sector for facilities construction, operation and maintenance. Since the year 2000, UZMA has worked with over 50 clients worldwide helping them realize the value of their assets.

With over 100 staff and 300 active consultants across our area of operations in Africa, the Middle East, the Indian Sub-continent, South East Asia and Australasia. UZMA Group provides Geoscience and Reservoir Engineering, Drilling Project Management, Project and Operations Support, Geological Laboratory Services, Wireline Services and Consultancy and Manpower Services from its head quarters in Malaysia and international offices in Miri, Perth, Bangkok, Jakarta and Doha. UZMA Berhad has been listed on Bursa Malaysia's Main Board since July 2008
